

RITCHEY SWISS CROSS

First piloted to victory by Thomas Frischknecht in 1994, this newest version of the Ritchey Swiss Cross continues its evolution as a thoroughbred steel cyclocross rig with a legendary pedigree. Maintaining the exquisite ride characteristics for which it has been known for decades, the new Swiss Cross features modern standards such as flat-mount disc brake compatibility and thru-axles. Its race-ready geometry will ignite the competitive spirit, while clearance for 40mm tires will appeal to those who's pursuits reach beyond the course tape.

Built with Ritchey's own triple-buttressed Logic tubing, the Swiss Cross remains lightweight and compliant, and offers the winning combination of confident responsiveness and razor-sharp handling. Tom Ritchey's deep cyclocross heritage can be felt with every pedal stroke, each turn around the course tape and in all of the sprints.

- Fits up to 40mm tires
- Compatible with flat-mount disc brakes
- Front and rear thru-axles
